Revamping Integrating Technology Courses To Include Common Core And Revised Licensure Programs

- Basic Notes/Assumptions
  - Technology is to be integrated, not the focus
    - Enhances lesson
  - Not all schools have the same hardware/ software or funds
  - Old and new technologies are BOTH needed
  - Just because students use current software does not mean they know how to integrate it into a classroom
  - Just because students know the technology, does not mean they know how to make it enhance a lesson (ie: spreadsheets or Word Processing)
  - Students do not always know as much as they think they do
- Software and Hardware
  - Desktop and Mobile
  - Word Processing, Spreadsheets, PowerPoint
    - Don't assume they know the instructional principles needed to create affective and efficient materials
  - Website
    - Create from scratch using something like Expressions
      - Will give them control and will help understand the process of creating effective and efficient materials
  - Apps
    - Review and Evaluate
      - In order to be able to choose appropriate materials (apps as well as other materials)
    - Find various tools to use and enhance lessons
      - Not a play toy
  - Interactive Whiteboard
    - Use templates already created
    - Create their own files
  - Mindtools
